

VIRTUAL COLLECTOR[®]

ONLINE COLLECTIONS TOOL

VIRTUAL COLLECTOR[®] is an innovative online revenue collections mechanism, designed for municipalities. The system has a central repository of information containing all transactions registered. The solution gives the municipality citizens greater flexibility, significantly reducing the time taken to perform such transactions. Also, citizens and merchants can register and request their municipality certifications and licenses, as well as pay their taxes through the portal. Merchants and citizens can view the history of their transactions, and receive collection notices, reminders, and announcements. The municipality streamlines procedures and carries out detailed analysis of their revenues.

How does it work?

Benefits

- Streamline processes
- Flexible for merchants
- Generate instant reports
- Online tax collection
- Reduce operational costs
- Available 24/7

Modules

Registration

Certifications

Administrative

Business Licenses
